Senate Bill 57 (as introduced 1-26-99)
Sponsor: Senator Walter H. North
Committee: Education

Date Completed: 4-14-99

CONTENT

The bill would amend the Pupil Transportation Act to do the following:

- **Require a motor vehicle operated by a public or nonpublic school, an agent of a school, a private business, or a governmental unit for transporting students to meet or exceed Federal safety standards.**
- **Prohibit a vehicle, other than a school bus, with a seating capacity of at least 11 passengers from being used to transport pupils to and from school after October 1, 2002.**
- **Permit a school district to contract for a motor bus to transport pupils occasionally to and from school-related events, and permit the Department of Education to authorize the use of a motor bus for the regular route transportation of pupils.**
- **Establish a two-tier visibility requirement for bus stops based on the speed limit of a road or highway.**
- **Revise the definitions of "school bus" and "pupil transportation vehicle", and define "school transportation vehicle".**

Passenger Protection Standards

Currently, each motor vehicle owned by a public, private, or governmental agency and operated for transporting passengers to or from school or school-related events must meet or exceed the passenger protection Federal motor vehicle safety standards that apply to the construction and sale of that vehicle. Under the bill, this requirement would apply to a motor vehicle owned or operated by a public or private nonpublic school, an agent of a school, a private business, or a unit of government. The bill also would require that these vehicles meet or exceed Federal standards for all seating positions in the vehicles. The bill would delete the current provision that a vehicle for which there are no applicable passenger protection Federal motor vehicle safety standards may not be used to transport passengers to and from school and school-related events.

The bill would delete the requirement that vehicles, other than school buses, meet these requirements by October 1, 2002. Under the bill, a vehicle, other than a school bus, with a manufacturer's rated seating capacity of at least 11 passengers, including the driver, could not be used to transport pupils to or from school or school-related events after October 1, 2002, except as provided in the Act. The bill specifies that this provision would not apply to a commercial motor vehicle operated by a carrier certificated by the State Transportation Department, or a bus operated by a public transit agency or authority excluded from the Act's definition of "school bus". The bill also would delete the current exemption for vehicles used by parents to transport children to and from school and school-related events under contract with the school.

Currently, a school may not purchase a vehicle to transport pupils if the vehicle does not meet or exceed the passenger protection Federal motor vehicle safety standards applicable to that vehicle. (This provision applies to vehicles, other than school buses, purchased on or after October 1, 1993.) The bill would refer to vehicles having a manufacturer's rated seating capacity of at least 11 passengers, including the driver.

Under the bill, a school or an agent of a school could transport pupils with disabilities in mobile seating devices in accordance with Federal standards specifically applicable to these pupils, their wheelchairs, and related wheelchair securement and occupant protection systems.

Motor Buses

The bill would permit a school district to contract with a motor carrier of passengers for a motor bus to be used for occasional transportation of pupils to or from school-related events. Also, the Department of Education could authorize the use of a motor bus for the regular route transportation of pupils to or from school or home. The authorization would have to be in writing and include conditions or restrictions that were necessary to safeguard the health, safety, and welfare of the pupils.

The bill would delete current provisions permitting a school district to use a vehicle constructed to standards comparable to those used by Greyhound-type buses for occasionally transporting pupils, provided that a contract for the construction and delivery of that vehicle was entered into after January 1, 1990, but before the Act's effective date, and prohibiting a vehicle from being used for the regular route transportation of students to and from school and home.

Visibility Requirements

The Act prescribes the methods for receiving or discharging pupils that a school bus driver must follow, including the activation of flashing red or amber lights. The bill would refer to "alternately red or amber flashing overhead" lights.

Currently, a school bus driver when using alternately flashing red lights may not stop the bus to receive or discharge pupils unless the bus is clearly and continuously visible in its stopped position to approaching vehicles on a highway or roadway for at least 400 feet. Under the bill, this would apply if the lawful speed limit were more than 35 miles per hour. When the distance from the stopped bus to the end of the highway or roadway was less than 400 feet, clear and continuous visibility would have to be available from the bus to the end of the highway or roadway.

If the lawful speed limit were not more than 35 miles per hour, the stopped bus would have to be clearly and continuously visible to approaching vehicles for at least 200 feet. When the distance from the stopped bus to the end of the highway or roadway was less than 200 feet, clear and continuous visibility would have to be available from the bus to the end of the highway or roadway.

Definitions

"Pupil transportation vehicle" currently means any vehicle other than a school bus that is used to transport pupils to or from school or school-related events. "Pupil transportation vehicle" does not include a vehicle operated by a municipally owned transportation system or by a carrier certified by the State Transportation Department. Under the bill, "pupil transportation vehicle" would mean any vehicle other than a school bus with a manufacturer's rated seating capacity of at least 11 passengers, including the driver, that was used to transport pupils to or from school or school-related events. This would not include a vehicle operated by a motor carrier of passengers or a public transit agency, or a vehicle used by a parent or a parent's designee to transport his or her children to or from school or school-related events.

"School bus" currently means a motor vehicle, other than a station wagon or passenger van, with a manufacturer's rated seating capacity of at least 16 passengers, used for the transportation of school pupils to and from school and school-related events, that either is owned by a school or, if owned by an entity other than a school, is transporting school pupils under a contract agreement with the school. The definition also specifies vehicles that are not a school bus. Under the bill, "school bus" would mean a motor vehicle, other than a pupil transportation vehicle, with a manufacturer's rated seating capacity of at least 11 passengers, including the driver, used for the transportation of pupils to or from school or school-related events, that was owned by a school or used to transport pupils under a contract or agreement with a school.

"School transportation vehicle" would mean any motor vehicle with a manufacturer's rated seating capacity of up to 10 passengers, including the driver, when operated for the scheduled transportation of pupils to or from school or school-related events. "School transportation vehicle" would not include a vehicle used by a parent or parent's designee to transport children to or from school or school-related events.

In addition, the bill would define “motor bus” and motor carrier of passengers” as those terms are defined in the Motor Bus Transportation Act. The bill also would add a public school academy and a university school to the definition of “public school”.
